

Australia High Temperatures Forecast

A heatwave is expected to last until at least December 4 in some areas of far north-eastern Australia. Wildfire risk is higher in impacted areas. Parts of far northern Queensland are expected to continue to experience high temperatures through at least December 4. Over the next few days, Far North Queensland is expected to see maximum temperatures of 31–39 C (88–102 F) and night time minimums of 21–25 C (70–77 F).
