Message from Federal Education Minister

Education plays the most important role in development of nations. The government assigns highest priority to developing a high quality, equitable and widely accessible education system in Pakistan. The management of such an education system necessitates informed decision making. It is need of the hour to have widespread information dissemination mechanisms by utilizing state of the art technologies to facilitate different levels of management in the education sector. Pakistan Education Atlas, using technologies like GIS and internet, would be very useful for the education system and would assist in informed decision making at all levels of management.

Sardar Aseff Ahmed Ali
Federal Education Minister

Message from Education Secretary

The Ministry of Education has established the National Education Management Information System (NEMIS) at the Academy of Educational Planning and Management (AEPAM). The responsibility of NEMIS is to collate, consolidate, and analyze national education data and generate useful information to cater to the needs of policy makers, planners, managers and decision makers. NEMIS has identified and implemented information dissemination mechanisms. It has been publishing Pakistan Education Statistics reports regularly. To enhance the coverage of dissemination, other supplementary avenues of information dissemination are being explored. One such is GIS and map based information dissemination in the form of an Atlas, an effective medium the world over.

With advances in Information and Communication Technologies (ICT), internet is a useful dissemination medium. Ministry of Education with technical and financial collaboration of World Food Programme (WFP) has developed the printed as well as the on-line Pakistan Education Atlas.

This initiative is an important step towards increased utilization of education statistics. Its potential to prompt improvement is significant as it can assist in informed decision making by education managers, facilitate education sector research, and serve as a source of reliable information for international organizations.

Mohammad Athar Tahir
Secretary
Ministry of Education

Message from WFP Representative

The United Nations World Food Programme (WFP) has an ongoing commitment with the Government of Pakistan to ensure progress towards the Millennium Development Goals; including the achievement of universal primary education. With a long history of implementing school feeding activities across the country, WFP has been helping children from food insecure families to access education, retain students and promote completion of the primary school cycle by both boys and girls.

Within the context of the ONE-UN program in Pakistan, WFP has more recently collaborated with the Academy of Educational Planning and Management (AEPAM) to strengthen the use of available education information and - in the longer term - improve the quality of education data for analysis and policymaking purposes.

The Pakistan Education Atlas 2010 is a result of this partnership; the first such exercise to study a broad array of education-related indicators. Examining individual schools, data has been aggregated at the district level, allowing users to access decentralized information for the entire country. The visual presentation of all indicators offers a unique opportunity to examine spatial patterns; and place them against the backdrop of population and topographic features.

Indicators depicted in the Atlas have been carefully selected through stakeholder consultations; reflecting the interests of public education managers, and those from the humanitarian and development sectors.

It is hoped that the Atlas will serve to stimulate education-related discourse in Pakistan, including ways to overcome discrepancies in indicator definitions or data quality. This is an ongoing process that should lead to continuous improvement whenever a new Education Atlas is produced; institutionalizing the ongoing strengthening of EMIS data quality at both the local and federal levels.

Building on the experience gained through the 2002 Education Atlas published by the Planning Commission's Center for Research on Poverty Reduction and Income Distribution (CRPRID), the 2010 Atlas has been completed during April - July 2010. Practical outputs produced by the initiative include this printed series of maps and accompanying detailed data tables, and a web-based interactive edition of the same. The latter is an innovative tool aimed at making information available to a wide-ranging audience, while reducing dissemination time through a direct link to AEPAM databases. In the context of producing this Atlas, and as a measure of building national capacity, eighteen provincial and federal Education Management Information System (EMIS) staff members were imparted with specialized training in various mapping functions, ensuring that this Atlas can be regularly updated in the coming years.

I would like to thank AEPAM and WFP colleagues for their dedicated work on the Pakistan Education Atlas 2010.

Wolfgang Herbinger
WFP Representative

Acknowledgements

On behalf of Academy of Educational Planning and Management, I would like to thank all those individuals who helped make possible this very important contribution towards utilization of education data.

I would like to acknowledge the contribution of NEMIS team led by Mr. Zafar I. Malik, Director of EMIS and the World Food Programme (WFP) team led by Ms. Laura de Franchis, head of VAM and M&E unit, for their dedicated work towards achievement of project goals. Special mention should be made of Syed Fawad Raza of WFP who was instrumental in all three components of the project i.e. GIS mapping of data, development of web interface and alongside Mr. Axel Pustan, training of technical experts. Mr. Nasir Amin and Mr. Yasir Irfan of NEMIS worked very hard on preparation of data and indicators for Atlas.

Contribution of WFP training team should be especially acknowledged. They did a great job of training the NEMIS and provincial IT experts in Geographical Information Systems (GIS), this training will go a long way towards sustainability of Atlas development exercise in the times to come.

Finally I would like to thank the one-UN program, in general, and the World Food Programme, in particular, for their technical and financial support for this important venture.

Shaigan Shareef Malik
Director General (AEPAM)

Introduction

The Pakistan Education Atlas project was initiated in April 2010 with a view to enhance the coverage of dissemination of education statistics and indicators by using Geographical Information System (GIS) technologies and Internet. This project is a collaborative venture between the World Food Programme (WFP) and the Federal Ministry of Education (MoE) through the National Education Management Information System (NEMIS) at the Academy of Educational Planning and Management (AEPAM).

The project has three components, which are: (i) development of the printed Pakistan Education Atlas 2010, (ii) development of an on-line version of the Education Atlas 2010 and (iii) capacity building of NEMIS and provincial EMIS staff through training in GIS development technologies. All three components of the project have been successfully completed.

This Atlas maps some of the most important education indicators at district level; it primarily focuses on education institutions, enrolment, teachers and facilities. To reflect the equity of the education system, the indicators are segregated by gender, urban and rural areas, and levels of education institutions. For every indicator in this document the national average is provided as a reference.

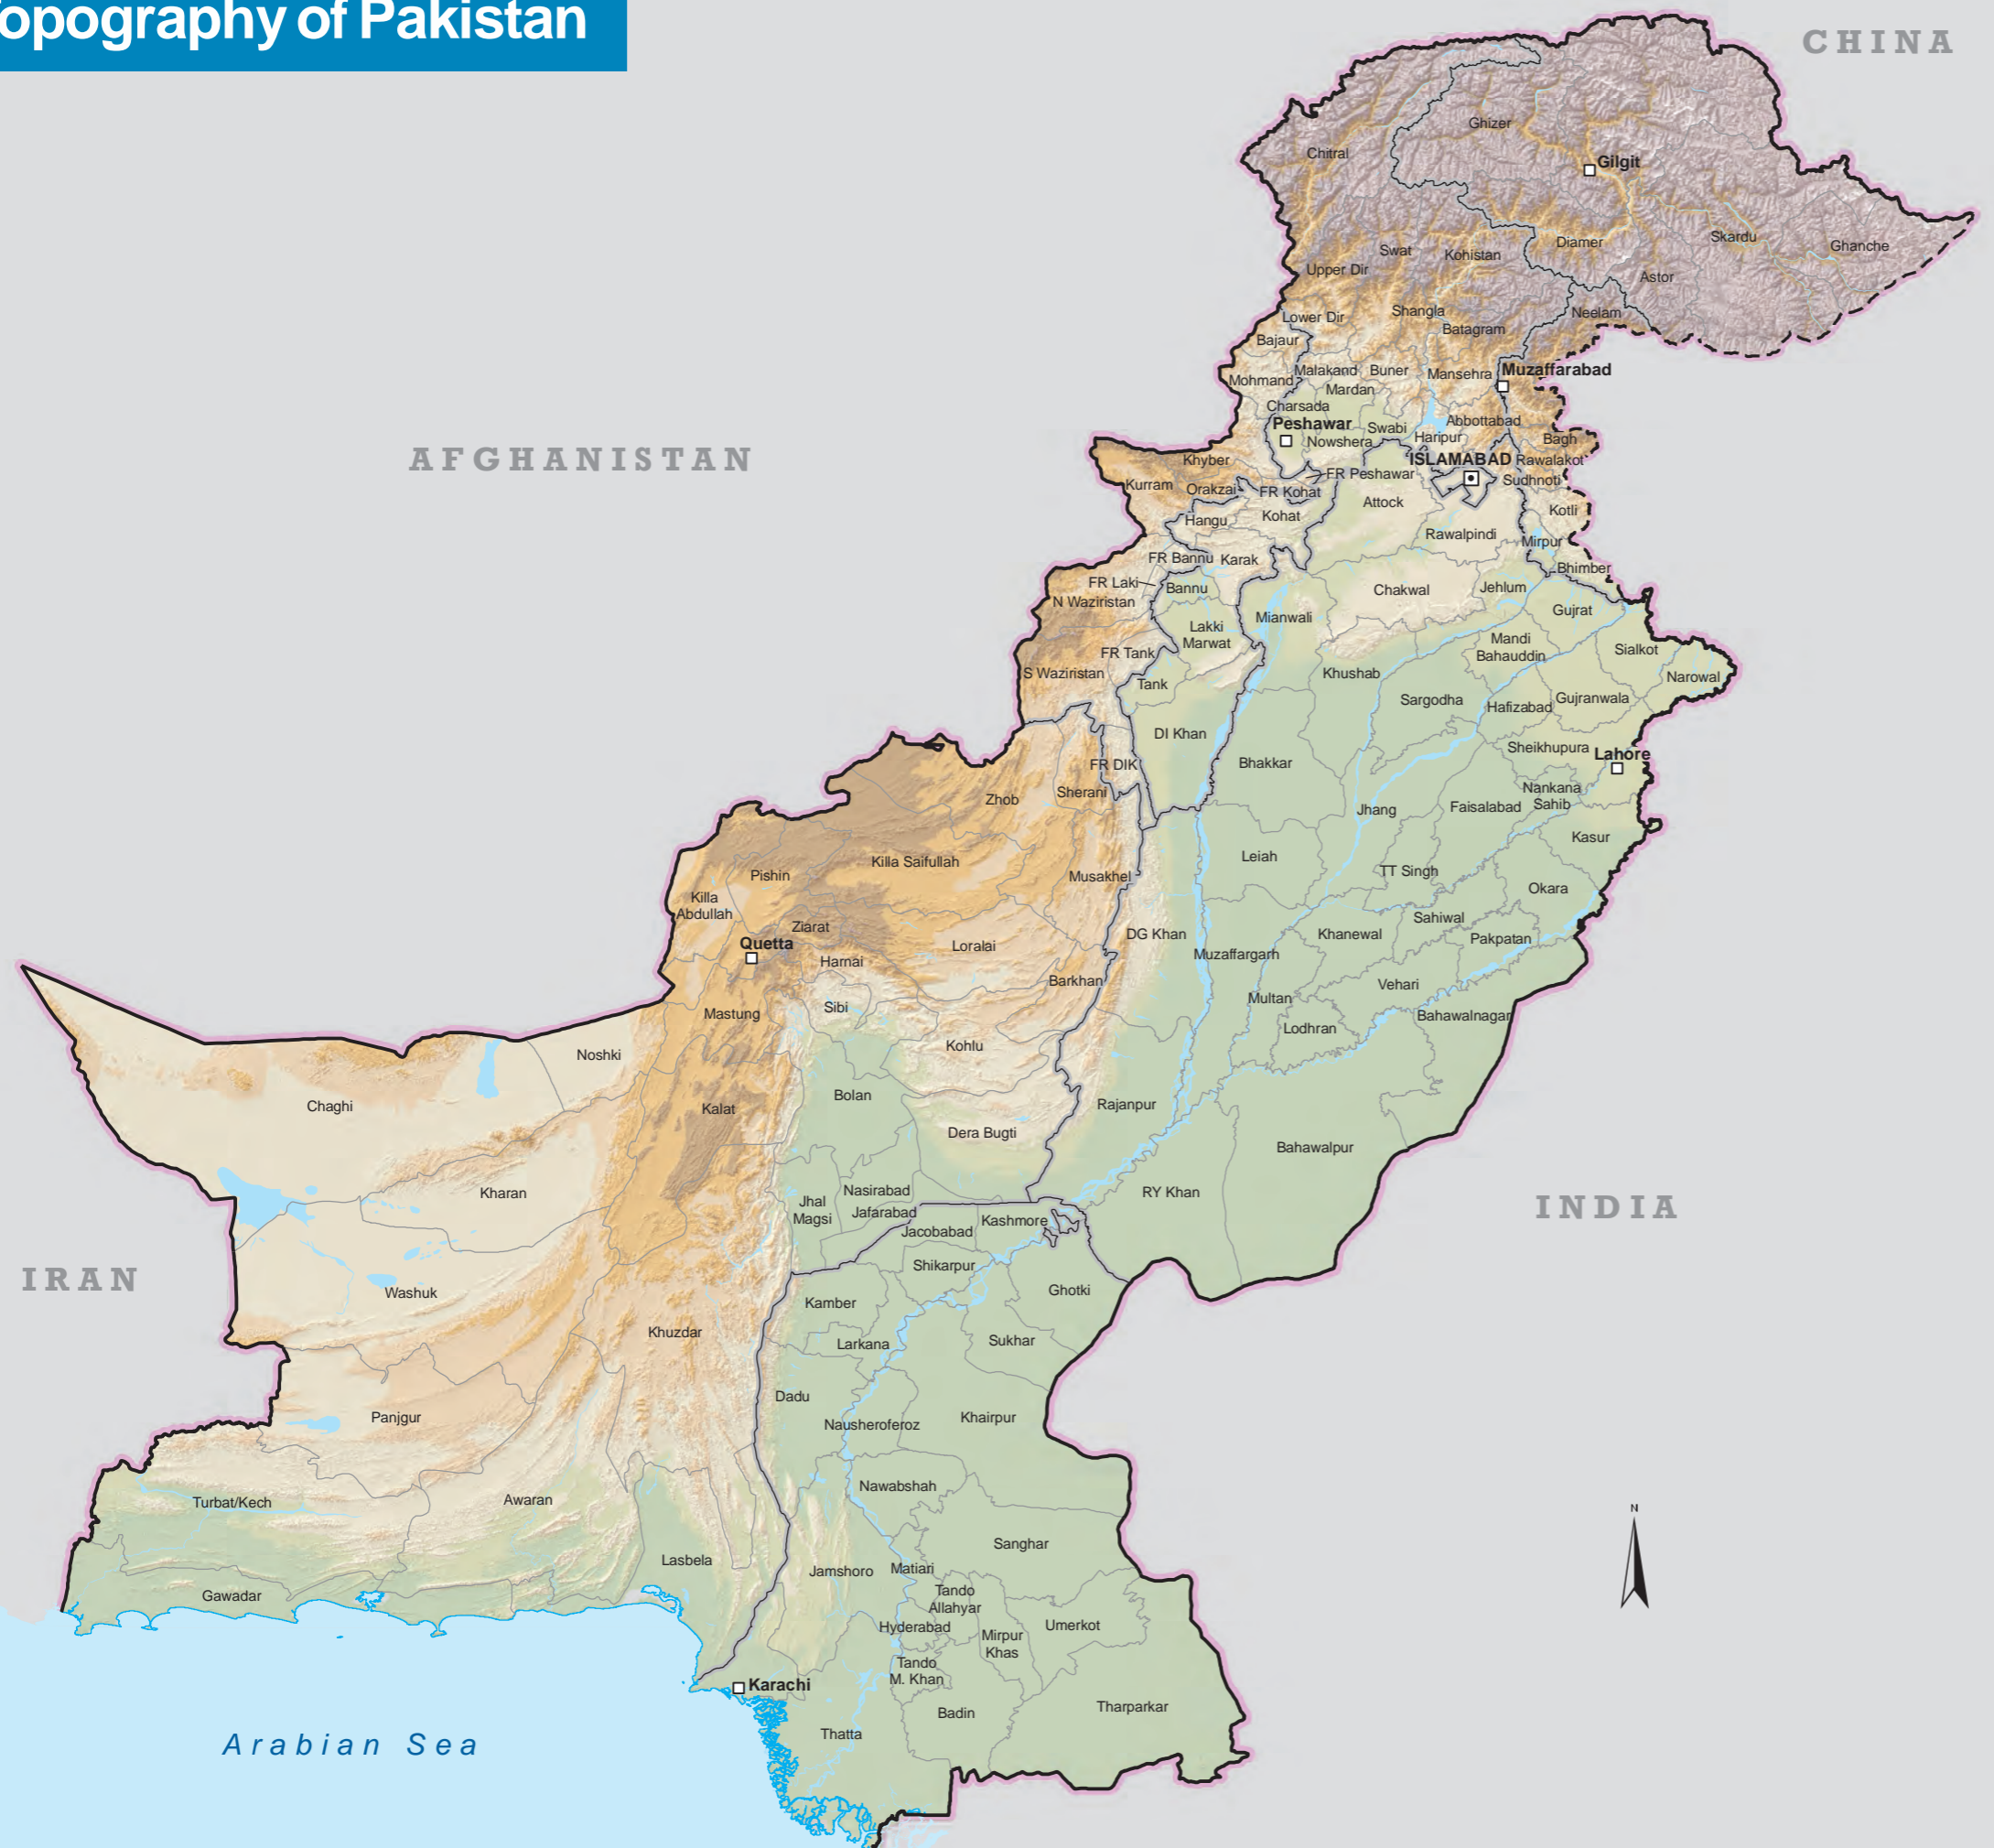

The same information is available in the on-line version of the Atlas which is accessible through internet. The on-line version is more dynamic and allows zooming in to areas on the map, navigation through map levels and determining the exact distance between locations. With the availability of internet in hundreds of cities/towns in Pakistan, this version of the Atlas provides widespread, readily available, cost efficient and easy to use education statistics throughout the country as well as to international users.

To facilitate the long term sustainability of the Atlas development, both NEMIS as well as provincial EMIS staff have been trained by a team of WFP GIS experts. The capacity built through this training will also contribute towards other GIS based projects in future; NEMIS has already started working as the GIS hub at the MoE, and providing expert advice and training to other government organizations.

Pupil Teacher Ratio in Primary Schools* in Rural Areas by District

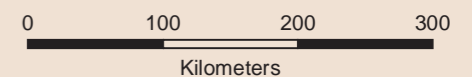

- National Capital
- Province Capital
- International Boundary
- - - Line of Control
- Province Boundary
- District Boundary

Pupil Teacher Ratio Primary Schools* in Rural Areas

- Less than 15
- 15 - 30
- 31 - 40**
- 41 - 50
- Above 50

* Mosque Schools are included
** National Average is 36.9

Method of Calculation:
Pupil Teacher Ratio = $\frac{\text{Number of Students}}{\text{Number of Teachers}}$

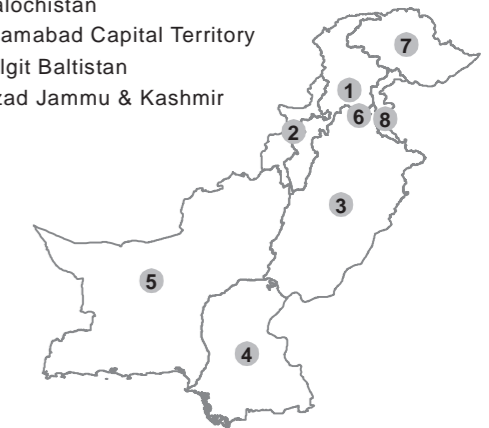

Disclaimer:

Definitions and Technical Notes

The National Educational Management Information System (NEMIS) is an integral part of the Academy of Educational Planning and Management (AEPAM). The main purpose of NEMIS is to consolidate and collate education statistics, maintain a comprehensive national education database, set standards for quality improvement of education data, and provide technical support to the provincial and district Education Management Information Systems (EMIS) to generate and maintain data. The EMIS units are responsible for collection, compilation, analysis and dissemination of education statistics/data of their respective provinces/regions. These units usually collect data through their district EMIS cells by conducting the annual school census. The provincial data is transmitted to NEMIS for consolidation at the national level. AEPAM plays a coordination role in addressing crucial issues and problems arising with regard to the compatibility of questionnaires, statistical terminologies, data requirements for the development of core educational indicators, data discrepancies and inconsistencies, data reliability and validity and the timely availability of data.

The Pakistan Education Atlas analyses the available information geographically to see the spatial patterns of various indicators. All the indicators used in this publication were selected through stakeholder consultations and capitalizing primarily on available data. The population dependent variables such as Net Enrolment Rate (NER) and Gross Enrolment Rate (GER) were not calculated due to the unavailability of representative population data for the school-going age groups. The data on mixed schools (co-educational) is also not included in the analysis owing to differences between provinces on the definition and registration of mixed schools.

Below are the definitions of the main indicators used in this atlas;

Enrolment by Stage: Enrolment by Stage defines the students enrolled in a particular class range irrespective of the official gender or level of the school. Two stages of education are discussed in this atlas i.e. “Primary Stage” (Class 0-5) and “Middle and Secondary Stage” (Class 6-12).

Middle and secondary stage is a super set of Middle Stage (Class 6-8), High Stage (Class 9-10) and Higher Secondary Stage (Class 11-12).

Primary Schools: A primary school is an institution in which children receive the first stage of education that is from class zero (Kachi) to class five. However, some primary schools also provide education till class eight (Middle Stage) or even higher.

Middle Schools: In middle schools children receive middle stage of education. Most of the middle schools have primary stage and some also have a High stage.

High Schools: In high schools students receive education at High stage and most of the high schools have middle stage and some have primary stage too. Some of the high schools offer education till class 12 and are known as **Higher Secondary Schools**.

Note: The term “Middle and Secondary Schools” is a super set of Middle, High and Higher Secondary Schools.

Gender Parity Index (GPI) of Enrolment: This reflects girls’ level of access to education compared to that of boys. In its crude form it is a ratio of girls enrolment to the boys’ enrolment though it is also calculated for other educational indicators such as survival rate to grade five or drop out rate etc. A GPI of less than 1 indicates that there are fewer girls than boys in the formal education system. A GPI of more than 1 means that there are proportionately more girls enrolled as compared to the boys. A score of 1 reflects equal enrolment for boys and girls. It is calculated using the following formula;

$$\text{Gender Parity Index} = \frac{\text{Indicator Value for Girls}}{\text{Indicator Value for Boys}} \times 100$$

Pupil-Teacher Ratio (PTR): This is one of the most common indicators used in educational planning. A low number of pupils per teacher suggests that students will have a higher chance of contact with the teachers and hence a better teaching-learning process. This would also tend to indicate a more expensive education. This ratio is also used to measure the level of human resource input (teachers). Many planners also use this ratio for projecting the number of teachers required. It can be calculated by dividing the total number of pupils enrolled in a specific education level by the number of teacher at the same level.

$$\text{PTR} = \frac{\text{Total number of pupils enrolled in a particular education level}}{\text{Total number of teachers in same level}}$$

Survival Rate to Grade Five: This is the proportion of a cohort of pupils who reached Grade 5 expressed as a percentage of pupils enrolled in the first grade of a given cycle in a given school year. This indicator is used to show the extent to which the school system can retain pupils, with or without repetition, and reflects the dropout rate. It is also used to measure the impact of dropout on internal efficiency. It is calculated by dividing the total number of pupils belonging to a pupil cohort who reached Grade 5 of primary education by the number of pupils in the original pupil cohort (i.e. those pupils who enrolled together in the first grade of primary education) multiplied by 100. Usually this indicator is typically derived using a reconstructed student cohort flow model. It requires the following data:

- Number of students enrolled by grade for two consecutive years
- Number of repeaters by grade in the second school year
- Number of graduates (successful completers) in the first school year
- Number of net transfer students (optional)
