

### Advisory for Australia

**Country:** Australia

**Hazard Type:** Cyclonic Activity

**Intensity:** High

**Expected Time of Occurrence:** 2024-12-15 to 2024-12-19

**Probability of Precipitation:** There is a high probability (>70%) of massive downpours in the western coastal regions of Australia during the stated period, with widespread rainfall spreading eastwards across the interior. These conditions are associated with significant cyclonic activity projected for the western coast of Australia.

**Cyclonic Summary:** There is a high likelihood of a significant cyclonic event impacting the western coastal regions, with potential widespread effects due to heavy rainfall extending inland. Specific details regarding landfall remain uncertain due to variations in computer model projections.
